For two bedroom flats/units there were very large annual increases recorded in median rent in Botany Bay (31%) and Burwood (22.2%). In both locations the big increase is due to the lodgement of a large number of bonds related to one apartment block. Within the rest of GMR, the largest annual increase was 6.7% in Wollongong.

Explanatory notes

1. Statistics in this Report are based on two sources. Rental statistics are derived from information provided on the bond lodgement form that is lodged with the Renting Services Branch (RSB) of the Office of Fair Trading. Sales statistics are derived from information provided on the 'Notice of Sale or Transfer of Land' form that is lodged with Land and Property Information (LPI), a division of the Department of Finance and Services NSW.
2. The geographic areas for reporting data are based on the Australian Statistical Geography Standard (ASGS) of the Australian Bureau of Statistics (ABS) (2011) and on the Australian Standard Geographical Classification (ASGC) of the ABS (2011). For both the rent and sales data sets, the address of each dwelling is coded to the Statistical Local Area (SLA) under the ASGC (2011) and then aggregated to the Local Government Area (LGA). The address of each dwelling is also coded to the Statistical Area Level 2 (SA2) under the ASGS (2011) and then aggregated to Statistical Areas Level 3 and Level 4 (SA3, SA4). Of the 28 SA4s in NSW, 15 aggregate to Greater Sydney and 13 aggregate to the Rest of NSW. The combined area of Greater Sydney and the LGAs of Newcastle, Cessnock, Maitland, Port Stephens, Lake Macquarie, Wollongong, Shellharbour and Kiama is defined as the 'Greater Metropolitan Region (GMR)'. 'Rest of NSW' as used in this publication is that part of the state not in the GMR. The LGAs in Greater Sydney are also grouped into Inner, Middle and Outer rings.
3. For confidentiality, we do not report rents and sale prices in any geographical area where the number of new bonds or sales is 10 or less. Statistics calculated from samples of sizes between 10 and 30 are shown with an 's' to indicate small sample in the relevant table. We suggest data based on small samples are treated with caution, particularly when assessing quarterly and annual changes.
4. The median is the value that divides a set of ordered numbers equally into a bottom half and top half. Unlike means, medians are not significantly affected by unusually high or low values. Therefore median values are better measures of central tendency. In addition, some tables provide first and third quartiles. These are the 25 and 75 percentiles in the set of ordered numbers.

Rent statistics

1. Total bonds held refer to those live bonds at the last date of the quarter. The total number of bonds held by the RSB does not equal the total number of rental properties. The two main reasons are that at any given time some properties are vacant, and secondly that there are cases where bonds are not always required by a landlord from their tenant, for example for informal lettings.
2. When new bonds are lodged with the RSB, rental values, dwelling type and bedroom number are not always provided. Typically, about 5% of these bonds do not provide rental values.

Sales statistics

1. Sales are reported according to their contract date. Generally, the vendor and purchaser agree on the sale price on or before the contract date. In many instances, there is a considerable time lapse between the contract and transfer dates. Therefore, in assigning a time period to each property sale, the contract date is considered to be more relevant for market price analyses than the transfer date.
2. The sales data are reported three months after the end of the reference quarter, when about 80% on average of the contracted sales have been notified. Waiting a further three months i.e. six months after the end of the reference quarter increases the notifications to about 90%. However, statistical testing on sale

price means and medians after three months and six months of notifications do not show any significant difference for most of the LGAs.

3. The quarterly and annual changes are based on revised figures for the previous quarters. Due to the time lapse between the contract date and when the sale is notified, the previous quarters' figures will usually change each quarter as more sales are reported.
4. A variety of factors contribute to anomalies in the sale price attributed to particular properties. To ensure that the statistics reflect the market price of a typical residential dwelling, the lower and upper 5% of sale prices for each LGA have been excluded. At LGA level, this does not affect the median but does remove outliers in the calculation of the mean and moves the first and third quartiles slightly towards the median. The impact at higher levels of aggregation is less predictable but is likely to provide a more reliable indication of sale prices.
5. Strata title properties usually include town houses, terraces/villas, flats/units (multi-unit dwellings) whereas non-strata title properties refer to separate houses. However, any multi-unit dwelling with a Torrens title would be counted as a non-strata property.

Changes to the geography

Changes were introduced into the September 2012 issue of the Rent and Sales Report to reflect the adoption by the ABS of a new Statistical Geographic Framework described in the Australian Statistical Geography Standard (ASGS) (2011). Details of the new ASGS are available at www.abs.gov.au, cat. no. 1270.0.55.001. The changes incorporated into the report are:

1. The Sydney region is now referred to as "Greater Sydney" and is defined as the aggregation of 15 Statistical Areas Level 4 (SA4) of the ASGS (2011). Greater Sydney approximates the Sydney Statistical Division (SD) under the former ASGC (2006) although the boundaries are not exactly coincident (the differences are marginal).
2. The Greater Metropolitan Region (GMR) is now defined as Greater Sydney combined with the Local Government Areas (LGAs) of Newcastle, Cessnock, Maitland, Port Stephens, Lake Macquarie, Wollongong, Shellharbour and Kiama.
3. "Rest of NSW" as used in this publication is that part of NSW that is not in the GMR. Rent and sales statistics in "Rest of NSW" are now reported by Statistical Area Level 3 (SA3) of the ASGS (2011) rather than by Statistical Subdivisions of the ASGC (2006).
4. Cessnock and Kiama LGAs are reported in both the GMR and the "Rest of NSW" figures due to the boundaries of the Lower Hunter and Southern Highlands SA3s crossing the boundary of the GMR.

Changes were introduced into the September 2013 issue of the Rent and Sales Report to reflect the adoption by the ABS of a new Australian Standard Geographical Classification (ASGC 2011) in parallel with ASGS (2011). The names of two LGAs were changed: Baulkham Hills is now known as The Hills Shire and Hastings is known as Port Macquarie-Hastings. These LGAs were given new codes and the codes of three rural LGAs were also changed but with no name change. There have essentially been no boundary changes since 2005.

A trend series of median rents and median sales by LGA for the Greater Metropolitan Region is available on the Housing NSW website at www.housing.nsw.gov.au. The trend series goes back to the March 1990 quarter for rents and March 1991 for sales.
