Explanatory notes

1. Statistics in this Report are based on two sources. Rental statistics are derived from information provided on the bond lodgement form that is lodged with Rental Bonds (RB), NSW Fair Trading, Office of Finance and Services, Department of The Treasury. Sales statistics are derived from information provided on the 'Notice of Sale or Transfer of Land' form that is lodged with Land and Property Information (LPI), Office of Finance and Services, Department of The Treasury.
2. The geographic areas for reporting data are based on the Australian Statistical Geography Standard (ASGS) of the Australian Bureau of Statistics (ABS) (2011) and on the Australian Standard Geographical Classification (ASGC) of the ABS (2011). For both the rent and sales data sets, the address of each dwelling is coded to the Statistical Local Area (SLA) under the ASGC (2011) and then aggregated to the Local Government Area (LGA). The address of each dwelling is also coded to the Statistical Area Level 2 (SA2) under the ASGS (2011) and then aggregated to Statistical Areas Level 3 and Level 4 (SA3, SA4). Of the 28 SA4 in NSW, 15 aggregate to Greater Sydney and 13 aggregate to Rest of NSW. The combined area of Greater Sydney and the LGAs of Newcastle, Cessnock, Maitland, Port Stephens, Lake Macquarie, Wollongong, Shellharbour and Kiama is defined as the "Greater Metropolitan Region (GMR)". The LGAs in Greater Sydney are also grouped into Inner, Middle and Outer rings. "Rest of NSW" as used in this publication is that part of the state not in the GMR.
3. For confidentiality, we do not report rents and sale prices in any geographical area where the number of new bonds or sales is 10 or less. Statistics calculated from samples of sizes between 10 and 30 are shown with an 's' to indicate small sample in the relevant table. We suggest data based on small samples are treated with caution, particularly when assessing quarterly and annual changes.
4. The median is the value that divides a set of ordered numbers equally into a bottom half and top half. Unlike means, medians are not significantly affected by unusually high or low values. Therefore median values are better measures of central tendency. In addition, some tables provide first and third quartiles. These are the 25 and 75 percentiles in the set of ordered numbers.

Rent statistics

1. Total bonds held refer to those live bonds at the last date of the quarter. The total number of bonds held by RB does not equal the total number of rental properties. The two main reasons are that at any given time some properties are vacant, and secondly that there are cases where bonds are not always required by a landlord from their tenant, for example for informal lettings.
2. When new bonds are lodged with RB, rental values, dwelling type and bedroom number are not always provided. Typically, about 5% of these bonds do not provide rental values.
3. Rental bonds lodged by Community Housing Organisations (CHOs) have been identified and excluded from the calculation of rent statistics back to June 2009. CHOAs have been lodging bonds with the RB for over a decade for dwellings that they manage and which they rent to tenants at below market rents (usually at least 20% below market rents). Over the last three years (since 2011) the inclusion of rental bonds submitted by CHOAs for social or affordable housing tenancies has had a measurable effect on median rents for the locations where there are substantial pockets of community housing. Hence these bonds are now excluded from the rent calculations so that the rents published reflect new private rentals only and are not diluted by lower social housing rents.

Sales statistics

1. Sales are reported according to their contract date. Generally, the vendor and purchaser agree on the sale price on or before the contract date. In many instances, there is a considerable time lapse between the contract and transfer dates. Therefore in assigning a time period to each property sale, the contract date is considered to be more relevant for market price analyses than the transfer date.

2. The sales data are reported three months after the end of the reference quarter, when about 80% on average of the contracted sales have been notified. Waiting a further three months i.e. six months after the end of the reference quarter increases the notifications to about 90%. However, statistical testing on sale price means and medians after three months and six months of notifications do not show any significant difference for most of the LGAs.
3. The quarterly and annual changes are based on revised figures for the previous quarters. Due to the time lapse between the contract date and when the sale is notified, the previous quarters' figures will usually change each quarter as more sales are reported.
4. A variety of factors contribute to anomalies in the sale price attributed to particular properties. To ensure that the statistics reflect the market price of a typical residential dwelling the lower and upper 5% of sale prices for each LGA have been excluded. At LGA level, this does not affect the median but does remove outliers in the calculation of the mean and moves the first and third quartiles slightly towards the median. The impact at higher levels of aggregation is less predictable but is likely to provide a more reliable indication of sale prices.
5. Strata title properties usually include town houses, terraces/villas, flats/units (multi-unit dwellings) whereas non-strata title properties refer to separate houses. However, any multi-unit dwelling with a Torrens title would be counted as a non-strata property.

Changes to the geography

Changes were introduced into the September 2012 issue of the Rent and Sales Report to reflect the adoption by the ABS of a new Statistical Geographic Framework described in the Australian Statistical Geography Standard (ASGS) (2011). Details of the new ASGS are available at www.abs.gov.au, cat. no.1270.0.55.001. The changes incorporated into the report are:

1. The Sydney region is now referred to as "Greater Sydney and is defined as the aggregation of 15 Statistical Areas Level 4 (SA4) of the ASGS (2011). Greater Sydney approximates the Sydney Statistical Division (SD) under the former ASGC (2006) although the boundaries are not exactly coincident (the differences are marginal).
2. The Greater Metropolitan Region (GMR) is now defined as Greater Sydney combined with the Local Government Areas (LGAs) of Newcastle, Cessnock, Maitland, Port Stephens, Lake Macquarie, Wollongong, Shellharbour and Kiama.
3. "Rest of NSW" as used in this publication is that part of NSW that is not in the GMR. Rent and sales statistics in "Rest of NSW" are now reported by Statistical Area Level 3 (SA3) of the ASGS (2011) rather than by SSD of the ASGC (2006);
4. Cessnock and Kiama LGAs are reported in both the GMR and the "Rest of NSW" figures due to the boundaries of the Lower Hunter and Southern Highlands SA3s crossing the boundary of the GMR.

Changes were introduced into the December 2013 issue of the Rent and Sales Report to reflect the adoption by the ABS of a new Australian Standard Geographical Classification (ASGC 2011) in parallel with ASGS (2011). The names of two LGAs were changed: Baulkham Hills is now known as The Hills Shire and Hastings is now known as Port Macquarie-Hastings. While there have been no boundary changes since 2005, the implementation of updated concordance tables has improved the accuracy of boundary definition which has led to changes in some LGAs. Impact has been greatest in the LGAs of Hawkesbury, Parramatta, The Hills Shire, Lane Cove, North Sydney, Willoughby, Cessnock and Maitland. As a consequence, application of the new concordances has been back-cast to December Quarter 2012.

A trend series of median rents and median sales by LGA for the Greater Metropolitan Region is available on the Housing NSW website at www.housing.nsw.gov.au. The trend series goes back to the March 1990 quarter for rents and March 1991 for Sales.
